

CASE STUDY

Amped Finance

Derivatives DEX on LightLink & Sonic

For derivatives DEXs that want to offer cross-network asset exposure without building bridges or managing per-network liquidity.

The Partner

Amped Finance is a derivatives DEX on LightLink and Sonic, founded by Daniel Enright, who also serves as Ecosystem Lead at LightLink. At the time, the LightLink ecosystem supported a limited set of assets, primarily ETH, LL, and stablecoins. Amped wanted to offer traders exposure to BTC, SOL, and AVAX without forcing users to leave the network.

The Challenge

Amped tried cross-network access before, but failed:

Bridged wBTC, ARB, and UNI from Ethereum, but users often had to wait up to 24 hours to bridge back	Required manual liquidity provisioning on DEXs, which still resulted in insufficient depth	Slippage issues forced users to bridge assets across networks to complete trades
-----------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------

The Solution

SODAX's SDK gave Amped capabilities that would have taken months to build independently:

- 1

Intent-Based Swaps

Amped now offers cross-network swaps powered by SODAX's intent-based execution. Users can swap assets across 14+ networks without leaving the Amped interface. Solvers handle routing and settlement automatically.
- 2

Multi-Chain Money Market in Days

Amped went from exploring a money market build to launching it in 2-4 days using the SDK. No custom smart contract development or liquidity bootstrapping was required.
- 3

Deep Liquidity from Day One

Instead of manually funding pools, Amped accessed SODAX's \$6M+ protocol-owned liquidity across BTC, ETH, SOL, SUI, and AVAX.

At a glance

- **2 weeks** to integrate
- **2-4 days** to launch money market
- **14+** networks now accessible
- **No** custom smart contract or liquidity bootstrapping required
- Primary cross-network execution interface for LightLink

About Amped

\$4.4M	30-day DEX Volume
\$1M+	Protocol Fee Revenue

Quote

“SODAX gives us access to deep, cross-chain liquidity, which improves execution and creates a better trading experience across the board.”

— Daniel Enright
Founder of Amped Finance

Amped Results

2-4 day launch <p>From initial exploration to live money market launch using the SDK</p>	Zero extra dev work <p>"The SDK is quite thorough. We haven't felt the need to do extra developmental work."</p>
Intent-based swaps live <p>Cross-network trading now available to Amped users via SODAX's solver network</p>	LightLink's primary bridge <p>Amped provides the LightLink Network's primary interface for cross-network asset movement</p>
New products unlocked <p>Enabled cross-network token index pools, allowing users to access diversified exposure across ecosystems in a single transaction</p>	

SODAX Integration

Foundation Layer <p>@SODAX/SDK This is the core logic that powers the entire ecosystem. It provides the raw functional modules required to build with SODAX programmatically.</p>
Connection Layer <p>@SODAX/WALLET-SDK-REACT An opinionated wrapper optimized for React applications, providing pre-built context providers and state management for wallet connections.</p>
Experience Layer <p>@SODAX/DAPP-KIT The fastest way to build with SODAX. This is an opinionated collection of UI components, hooks, and utilities that leverages the layers below it.</p>
